**Re: Annual Compliance Certification, Semi-Annual NSPS and NESHAP Reports  
Bridgeton Landfill, LLC, 189-0312**

Dear Ms. Donegan:

On behalf of Bridgeton Landfill, LLC, enclosed are the Annual Compliance Certification for the Title V Operating Permit (OP2001009), the Semi-Annual Report in accordance with New Source Performance Standards for Municipal Solid Waste Landfills 40 CFR 60 Subpart WWW (NSPS) and the Semi-Annual Report Startup, Shutdown and Malfunction (SSM) Plan per National Emissions Standards for Hazardous Air Pollutants for Municipal Solid Waste Landfills, being 40 CFR Part 63 Subpart AAAA (NESHAP). The enclosed reports serve as the 2006 Annual Compliance Report, the Semi-Annual NSPS Report and the SSM Report for the period July 1, 2006 through December 31, 2006.

I certify based on information and belief formed after reasonable inquiry, the statements and information in this document are true, accurate and complete.

If you have any questions, please contact Allen Steinkamp at (314) 739-5099 or Michele Bousad of Aquaterra Environmental Solutions at (573) 634-3307.

Sincerely,

ALLIED WASTE SERVICES

Tony Rosback  
District Manager

**Re: Semi-Annual Startup, Shutdown and Malfunction (SSM) Report  
2006 Semi-Annual Report  
Bridgeton Landfill, LLC 189-0312  
Air Operating Permit Number OP2001009  
Reporting Period: July 1, 2006 through December 31, 2006**

Dear Ms. Donegan:

The Bridgeton Landfill, LLC is subject to the National Emissions Standards for Hazardous Air Pollutants for Municipal Solid Waste Landfills, being 40 CFR Part 63 Subparts A and AAAA (NESHAP). The NESHAP requires a facility to prepare and implement a start-up, shutdown and malfunction (SSM) Plan. The SSM Plan includes the procedures for operating and maintaining affected landfill gas (LFG) collection and control equipment as well as continuous control device monitoring equipment during start-up, shutdown and malfunction events. The Bridgeton Landfill, LLC is an existing source and implemented the SSM Plan on January 16, 2003.

In accordance with 40 CFR §63.10(d)(5), a semi-annual report must be submitted to the regulatory authority within 30 days of the completion of the calendar half. The report shall contain information pertaining to the facility's compliance with the procedures in their SSM Plan during SSM events. This letter serves as the Semi-Annual SSM Report for the reporting period July 1, 2006 through December 31, 2006.

During the period of July 1, 2006 through December 31, 2006 the Bridgeton Landfill documented eighteen (18) SSM events in accordance with the Startup, Shutdown and Malfunction Plan developed for the facility and to comply with 40 CFR 63 Subpart AAAA. During this compliance period no deviations from the SSM Plan were recorded, therefore no revisions to the SSM Plan have been required.

For the reporting period, eighteen (18) start-up and three (3) shutdown events occurred. The actions taken at the facility for all SSM events during the reporting period July 1, 2006 through December 31, 2006 were consistent with the procedures listed in the SSM Plan at the facility. Records of SSM events are maintained at the facility and available for review.

**Bridgeton Landfill, LLC  
Semi-Annual Startup, Shutdown and Malfunction (SSM) Report  
2006 Semi-Annual Report: July 1, 2006 through December 31, 2006  
January 26, 2007**

During the reporting period, fifteen (15) malfunction events occurred, of which none caused an applicable limitation to be exceeded. Table 1 contains the date, duration and description of all malfunction events for the reporting period.

Attached is certification by the Responsible Official. If you have any questions regarding this Semi-Annual SSM Report, please contact me at (573) 442-6391.

Sincerely,  
Aquaterra Environmental Solutions, Inc.

Michele A. Boussad  
Senior Project Manager

**NSPS Semi-Annual Report (7/1/06-12/31/06)**  
**Bridgeton Landfill, LLC**  
**Bridgeton, Missouri**

**1.0 INTRODUCTION**

In accordance with 10 CSR 10-5.490(7)(H) each landfill that has a calculated non-methane organic compound (NMOC) emission rate equal to or greater than 25 Megagrams per year and 1.0 million Megagrams must submit a Semi-annual Report summarizing the gas system operations to verify compliance with 10 CSR 10-5.490 Municipal Solid Waste Landfill. In addition to the local requirements, the municipal solid waste landfill's NMOC emissions exceed 50 Megagrams per year, therefore the installation is subject to the requirements set forth in 40 CFR 60 Subpart WWW, New Source Performance Standards for Municipal Solid Waste Landfills (NSPS). This report serves as the semi-annual NSPS Report for the reporting period January 2006 through June 2006.

Documented in this report are exceedances of monitored parameters under 10 CSR 10-5.490 and 40 CFR 60 Subpart WWW. Information regarding operation of the landfill gas (LFG) extraction system was obtained from Bridgeton Landfill. The information regarding landfill surface monitoring was obtained from Herst and Associates. The wellfield monitoring data and the control device monitoring data was obtained from American Environmental Group (AEG) and Bridgeton Landfill.

Landfill gas at the Bridgeton Landfill is currently being collected from 82 gas extraction wells and associated header piping to a flare for control. During the reporting period two identical 3,500 standard cubic feet per minute (SCFM) were utilized to control the landfill gas collected.

## **2.0 NSPS COMPLIANCE REPORTING**

The following discusses each of the monitored parameters to be addressed in the semi-annual report to comply with 10 CSR 10-5.490 Restriction of Emissions from Municipal Solid Waste Landfills.

### **2.1 Exceedance of Monitoring of the Collection System**

*Regulation 10 CSR 10-5.490(7)(H)1 defines the value and length of time for exceedance of applicable parameters monitored under subsections (6)(A), (B), (C), and (D).*

#### **2.1.1 Gauge Pressure**

*Regulation 10 CSR 10-5.490(5)(A)3 requires the operation of the collection system with negative pressure at each wellhead. Any instant where positive pressure is monitored; the location and duration of the exceedance shall be documented.*

Based on the wellfield data enclosed in Appendix A, positive pressure was monitored at the wellhead GEW-23 on September 26, 2006 and GEW-01 on October 31, 2006. GEW-23 was replaced in October 5, 2006 due to high sludge levels monitored in June 2006. On October 31, 2006 Corrective action was initiated to correct the exceedance at GEW-01 was re-monitored on November 9, 2006, and recorded a negative pressure.

No other instances of positive pressure were monitored during the reporting period.

#### **2.1.2 Temperature**

*Regulation 10 CSR 10-5.490(3)(B)3.B.(III)(b) requires the operation of each interior wellhead in the collection system with a landfill gas temperature less than 131°F. Any instant where a temperature in excess of 131°F is monitored; the location and duration of the exceedance shall be documented.*

Per the approved *Gas Collection and Control System Report*, dated May 2003, prepared by Midwest Environmental Consultants, an alternative temperature of no greater than 140°F was approved to be monitored at each gas extraction wellhead.

Based on the wellfield data enclosed in Appendix A, a temperature of 142°F was recorded at GEW-19 on September 26, 2006. The vacuum was immediately adjusted on GEW-19 and the well was re-monitored on October 11, 2006, and recorded a temperature below 140°F. An exceedance report was submitted on October 9, 2006.

No other instances of landfill gas temperature above 140°F were monitored during the reporting period.

### **2.1.3 Oxygen or Nitrogen Concentration**

*Regulation 10 CSR 10-5.490(3)(B)3.B.(III)(b) requires the operation of each interior wellhead in the collection system with either a nitrogen level less than 20 percent or an oxygen level less than five percent. Any instant where the nitrogen level less exceeds 20 percent or the oxygen level exceeds five percent is monitored; the location and duration of the exceedance shall be documented.*

Based on the wellfield data enclosed in Appendix A, elevated oxygen levels were recorded during the reporting period. GEW-23 and GEW-27 continued to monitor elevated oxygen at the wellhead during the July through September monitoring events. An exceedance report was submitted on June 23, 2006. An investigation conducted in June of 2006 had revealed that sludge was encountered 45 feet below ground surface at GEW-23 and GEW-27 was blocked at 25 feet below grade surface. GEW-23 and GEW-27 were replaced with GEW-23A and GEW-27A in October 2006. The replacement wells, GEW-23A and GEW-27A monitored compliance with all parameters beginning in October 2006. GEW-23 and GEW-27 were disconnected from the gas collection system and abandoned.

In addition, an elevated oxygen level was recorded at the wellhead of GEW-65 on September 26, 2006 and October 31, 2006. This well was replaced with GEW-65A in October of 2006 and disconnected from the gas collection system and abandoned. GEW-65A was monitored compliance with all parameters during the November 2006 monitoring event. An exceedance report was submitted on October 11, 2006.

Wells GEW-6, GEW-56, GEW-59 and GEW-66 showed elevated oxygen level during the October 31, 2006, monitoring event. Corrective action was taken to correct the exceedances immediately, these wells were re-monitored on November 9, 2006 and monitored compliance with all parameters.

### **2.1.4 Operations of Gas Collection System**

*Regulation 10 CSR 10-5.490(7)(H)4 states all periods when the collection system was not operation in excess of five (5) days.*

Based on the wellfield data enclosed in Appendix A, during the December monitoring event wells GEW-7, GEW-16, GEW-17, GEW-26, GEW-53, GEW-54, GEW-55, GEW-58, GEW-

59, GEW-65, GEW-69 and GEW\_78 were not monitored. These wells were monitored during the January event and no exceedances were monitored for these wells.

There were no periods when the collection system was not operational for more than five days during the reporting period.

### **2.1.5 Surface Emissions Monitoring**

*Regulation 10 CSR 10-5.490(7)(H)5 states the location of each exceedance of the 500 parts per million (ppm) methane concentration as provided in (4)(D) and the concentration recorded at each location for which an exceedance was recorded in the previous month.*

In 2006 Bridgeton Landfill reverted to quarterly surface emissions monitoring due to the landfill closing February 28, 2005. Herst and Associates, Inc. completed quarterly surface monitoring on August 16, 2006 and November 27, 2006. No exceedances were observed above the 500 ppm regulatory threshold during either of these monitoring events.

### **2.1.6 Landfill Gas System Installation**

*Regulation 10 CSR 10-5.490(7)(H)6 states the date of installation and the location of each well or collection system expansion added.*

During the reporting period, Bridgeton Landfill completed installation of three replacement gas extraction well. GEW-23A, GEW-27A and GEW-65A were installed on October 5, 2006. Appendix C includes the LFG extraction well construction diagrams.

## **2.2 Exceedance of Monitoring of the Control Device**

### **2.2.1 Record of Operation**

*Regulation 10 CSR 10-5.490(7)(H)2 states the description and duration of all periods when the gas stream is diverted from the control device through a bypass line or the indication of bypass flow.*

There were no periods between July 1, 2006 and December 31, 2006, when the LFG stream was bypassed from a control device. The gas collection system at the Bridgeton Landfill does not have a bypass line and the blower/flare system is designed to shutdown the entire system when the flare is inoperable.

### 2.2.2 Continual Operation of Control Device

*Regulation 10 CSR 10-5.490(7)(H)3 states the description and duration of all periods when the control device was not operating for a period exceeding one (1) hour and length of time the control device was not operating.*

At present, total landfill gas collection ranges from 1,600 SCFM to 2,400 SCFM. Each enclosed flare has the design capacity to handle upwards of 3,500 SCFM of landfill gas. At these lower collection volumes, one flare is being used to manage landfill gas collected and the second enclosed flare is used as backup. If LFG collection approaches the maximum design rate of one enclosed flare, the other enclosed flare will become operational to control the LFG collected.

Based on the circular charts provided by Bridgeton Landfill the blower/flame system recorded five (5) events where the control device was inoperable for periods in excess of one hour. Appendix B contains the date, duration and description for the periods the control device was inoperable in excess of one hour. In addition, there were eight (8) malfunction events during which the continuous monitoring system was inoperable. Due to the absence of this data, no assumptions are made to define periods of control device downtime during these periods. These events are displayed in Table 1 below.

**Table1: Continuous Monitoring System Downtime**

| Date(s) of Event | Duration of Event (hours) |
|------------------|---------------------------|
| 7/14/06          | 65:25                     |
| 7/18/06          | 4:30                      |
| 8/3/06           | 1:30                      |
| 9/22/06          | 79:30                     |
| 10/19/06         | 5:30                      |
| 10/26/06         | 19:17                     |
| 11/20/06         | 2:30                      |
| 12/4/06          | 3:15                      |

### 2.2.3 Average Combustion Temperature

*Regulation 40 CFR 60.758(c)(1)(i) states for enclosed combustors all 3-hour periods of operation during which the average combustion temperature was more than 82°F below the average combustion temperature during the most recent performance test.*

**Semi-Annual Report  
 7/1/06-12/31/06  
 Bridgeton Landfill, LLC  
 January 2007**

The most recent performance test was conducted on February 16 and 17, 2005. For the two 3,500 SCFM identical enclosed flares the following compliance temperatures were recorded.

**Table 2: Compliance Temperatures for East and West Flares**

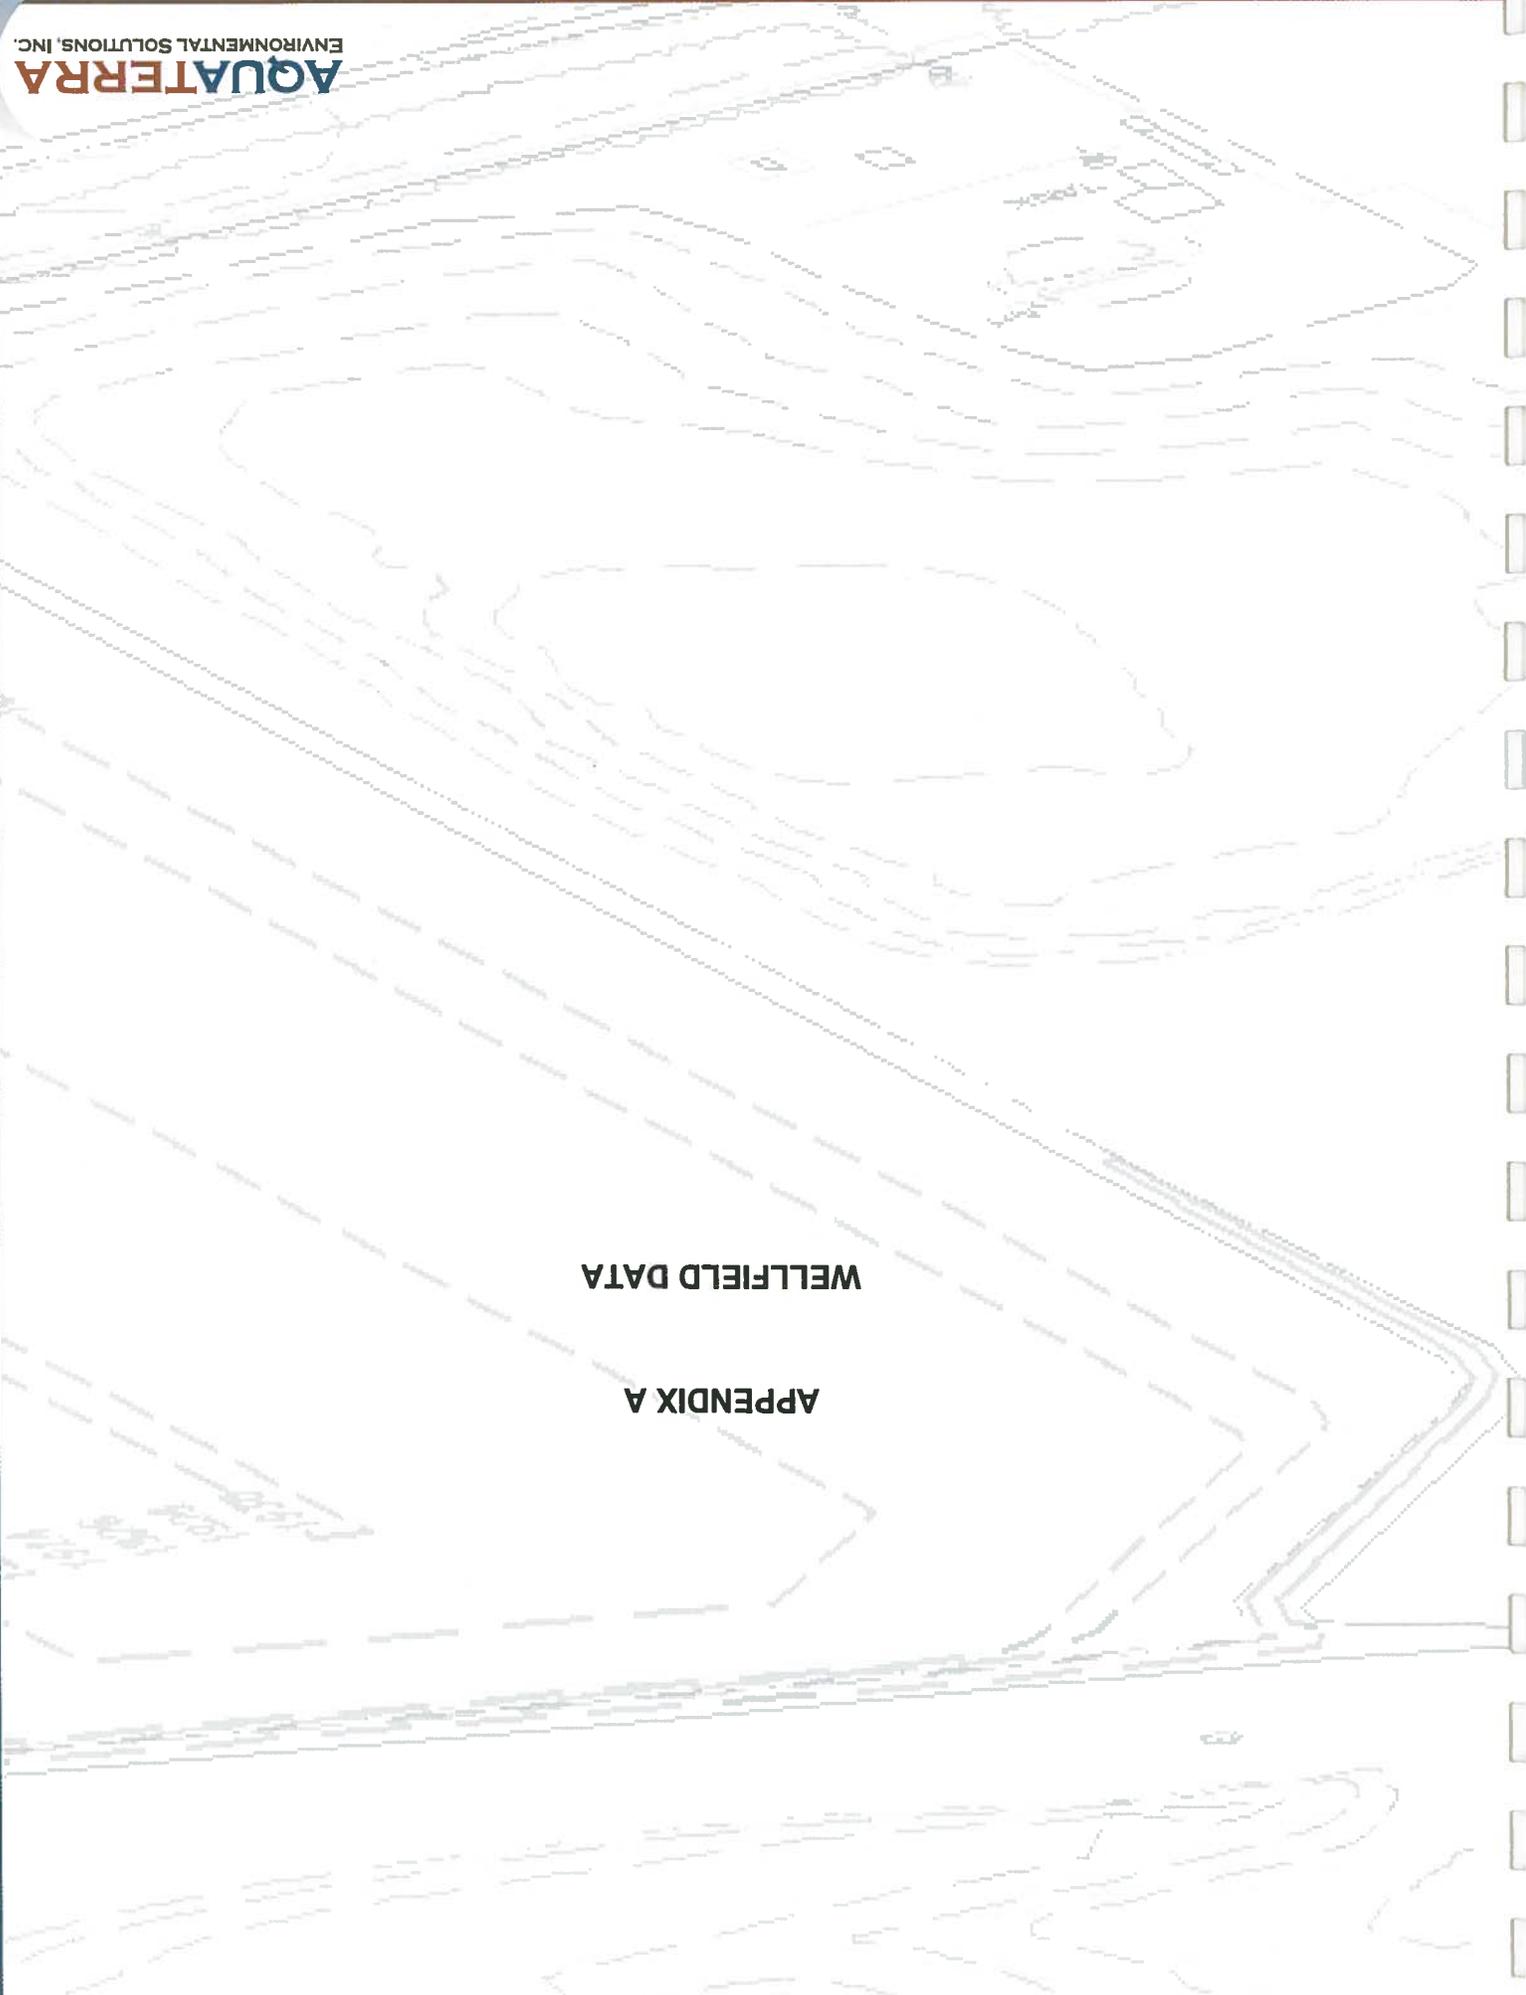

| <b>Flare</b>    | <b>Thermocouple</b> | <b>Compliance Temperature (°F)</b> |
|-----------------|---------------------|------------------------------------|
| East Flare (#1) | TE 202B             | 1398                               |
| West Flare (#2) | TE 202B             | 1488                               |

Based on the circular charts provided by Bridgeton Sanitary Landfill on the blower/flare system. The following events were documented where the 3-hour average combustion temperature was below the compliance temperatures in Table 2:

| <b>Initial Date</b> | <b>Date Returned to Compliance</b> | <b>Duration (hrs:min:sec)</b> |
|---------------------|------------------------------------|-------------------------------|
| 11/11/06 15:15      | 11/12/06 10:45                     | 19:30                         |
| 11/18/06 21:30      | 11/20/06 7:45                      | 10:15                         |
| 11/20/06 10:15      | 11/21/06 6:30                      | 20:15                         |

**WELLFIELD DATA**

**APPENDIX A**

Bridgeton Landfill Wellfield Data  
July, 2006

| Device ID | Date Time       | CH4<br>(Methane)<br>(%) | CO2<br>(Carbon<br>Dioxide)<br>(%) | O <sub>2</sub><br>(Oxygen)<br>(% by vol) | Initial<br>Static<br>Pressure<br>(inches<br>H <sub>2</sub> O) | Initial<br>Temperatu<br>re (Deg F) |
